Did Apollo 11 encounter UFO's on the moon? I received secret documents on such an event. I am taking a risk by making this public, but I figure it's worth it. .

According to hitherto reports, both Neil Armstrong and Edwin "Buzz" Aldrin saw UFO's shortly after the historic landing on the moon in Apollo 11 on July 21/ 1969. One of the astronauts referred to a "light" in or on a crater during a televised transmission, folllowed be a request from mission control for further information. Nothing more was heard. According to former NASA employee Otto Binder, radio hams with their own VHF receiving facilities that bypassed NASA's broadcasting outlets picked up the following exchange in the next letter.

This is a transmission received from Apollo 11 after the lunar landing.
MISSION CONTROL: What's there? Mission control calling Apollo 11.
APOLLO 11 : These babies are huge, sir...enormous....Oh, God, you wouldn't believe it! I'm telling you there are other spacecraft out there...lined up on the far side of the crater edge...they're on the moon watching us...

-- This is now a classified interview between an anonymous professor and Neil Armstrong referring to the above event.

PROFESSOR : What really happened out there with Apollo 11?
ARMSTRONG : It was incredible...of course, we had always known there was a possibility ...the fact is, we were warned off. There was never any question then of a space station or moon city.
PROFESSOR : How do you mean "warned off"?
ARMSTRONG : I can't go into details, except to say that their ships were far superior to ours both in size and technology-Boy, were they big!....and menacing....No, there is no question of a space station.
PROFESSOR : But NASA had other missions after Apollo 11?
ARMSTRONG : Naturally - NASA was committed at that time, and couldn't risk a panic on earth....But it really was a quick scoop and back again...

The Quarterly Report (1st Quarter 1989) of the Fund for UFO Research includes this item:

"In mid-March, the Executive Committee was informed that a Baltimore resident had recorded a very provocative statement made during a 'ham' radio rebroadcast of the communications between the space shuttle Discovery and Houston ground control. The statement as recorded was as follows: 'Uh, Houston, this is Discovery. We still have that alien spacecraft under (observance?).' To this there was no response from Houston. (The last word is a bit ambiguous, but the other words -- including 'alien spacecraft' are completely clear.) Subsequent investigations showed that the hams were rebroadcasting 'raw' communications from the spacecraft, rather than communications which had been passed first through Houston control. The so-called 'NASA select' audio channel, which was transmitted by Houston to the Press and other interested news media, *does not include this statement*.

This audio tape initiated a search for confirmation that it had, in fact, come from the spacecraft [Discovery, of course, :-)] and was not some bizarre hoax by a ham radio operator who transmitted on the same frequency as the Goddard ham station (WA3NAN). The Fund immediately arranged for a voice analysis to determine if the transmission was authentic and if so, which astronaut made the statement. At this writing, the analysis was inconclusive."

If anyone on the net can add any substantive information to help us get to the bottom of this probable hoax, please email or post to the net. (CSICOPers and fanatic skeptics: please don't waste net bandwidth with more gratuitous UFO ridicule, which only confirms your ignorance of the UFO literature.)

Thanks in advance for any substantive responses.
